

IN THE CLAIMS:

1. (Currently Amended) A navigation device which displays a present location, searches for and guides on a route to a destination, on the basis of a prepared road map and data of facilities, wherein the navigation device comprises:

5 searching and outputting means for searching for and outputting a predetermined number of facility information items of a desired type of element facility included in facilities existing ahead on an expressway, when the present location is on an expressway, from the data in accordance with a predetermined operation performed; and

10 a predetermined key for user activation wherein, the searching and outputting means is configured to simultaneously output ~~at least~~ two or more of the facilities including facility information of ~~at least any~~ two or more element facilities automatically together with related information of element facilities such as a name of element facility, a distance from the present location and a required time period from the present location, when operating the predetermined key for displaying information on desired types of element facilities on an already displayed map in the highway mode.

2. (Currently Amended) The navigation device according to claim 1, wherein the searching and outputting means is configured to ~~such that~~ display only the facility information of the element facility which exists before getting off the expressway, when the facility information is set as a target for searching and outputting, in the case in which the route to a destination is set.

3. (Currently Amended) The navigation device according to claim 2, further comprising ~~means for~~ an input portion, which enables the user to input information into a

receiving selection ~~of the~~ to designate a target for searching and outputting from among a plurality of types of element facilities.

4. (Currently Amended) A navigation method of displaying a present location on a display unit, searching for and guiding on a route to a destination with a computer, on the basis of a prepared road map and data of facilities, wherein the method comprises the ~~process~~ steps of:

searching and ~~outputting~~ ~~searching for and~~ outputting a predetermined number of
5 facility information items of a desired type of element facility included in the facilities existing ahead on an expressway, when ~~[[the]]~~ a present location is on an expressway, from ~~[[the]]~~ data in accordance with a predetermined operation to be performed, and wherein ~~[[a]]~~ the computer executes a process of simultaneously outputting ~~at least~~ two or more of the facilities including facility information of ~~at least any~~ two or more element facilities together with related
10 information of element facilities such as a name of an element facility, a distance from the present location and a required time period from the present location, when a user operates a predetermined key for displaying information on desired types of element facilities on an already displayed map in the highway mode.

5. (Currently Amended) The navigation method according to claim 4, wherein the process of searching and outputting is configured ~~such that~~ to display only the facility information of the element facility which exists before getting off the expressway ~~[[is]]~~ when the facility information items are set as a target for searching and outputting, in the case in which the
5 route to a destination is set.

6. (Currently Amended) The navigation method according to claim 5, further comprising the process of receiving a selection of the target for searching and outputting from among a plurality of types of element facilities.

7. (Currently Amended) A computer readable medium storing a navigation program which controls a computer to display a present location, search for and guide ~~[[on]]~~ a route to a destination on the display, on the basis of a prepared road map and data of facilities, wherein the program causes the computer to,

5 execute ~~[[the]]~~ a process of searching and ~~outputting for searching for and~~
outputting a predetermined number of facility information items of a desired type of element
facility included in the facilities existing ahead on an expressway, when the present location is on
an expressway, from the data of facilities in accordance with a predetermined operation to be
performed and wherein the computer is caused to execute a process of simultaneously outputting
10 ~~at least~~ two or more of the facilities including facility information of ~~at least any~~ two or more
element facilities together with related information of element facilities such as a name of an
element facility, a distance from the present location and a required time period from the present
location, when a user operates a predetermined key for displaying information on desired types
of element facilities on an already displayed map in the highway mode.

8. (Original) The navigation program according to claim 7, wherein, in the process of searching and outputting, the program causes the computer to set only the facility information of the element facility existing before getting off the expressway, as a target for searching and outputting, in the case in which the route to a destination is set.

9. (Currently Amended) The navigation program according to claim 8, further causing the computer to receive a selection of the target for searching and outputting from among a plurality of types of element facilities and displaying an icon indicating that an element facility does not exist.

10. (Currently Amended) The navigation device according to claim 1, further ~~comprising means for receiving~~ causing a computer to receive a selection of [[the]] a target for searching and outputting from among a plurality of types of element facilities.

11. (Currently Amended) The navigation method according to claim 4, further comprising the process of receiving a selection of [[the]] a target for searching and outputting from among a plurality of types of element facilities.

12. (Currently Amended) The navigation program according to claim 7, further causing the computer to receive selection of the target for searching and outputting from among a plurality of types of element facilities.

13. (New) The navigation device according to claim 1, further including configuring the searching and outputting means to set a plurality of types of moving image patterns representative of driving patterns based on a speed of a vehicle.

14. (New) The navigation method according to claim 4, further including enabling the user to set a plurality of types of moving image patterns representative of driving patterns based on a speed of a vehicle.
